

You are dealing with **nanotechnology** and would like to check whether your safety, risk management and prevention measures are adequate?

We conduct a risk assessment of your activities with focus on the manufacturing and use of nanomaterials. In 2 ½ days you will know whether and where there is a need for action and how you can effectively get a grip on those risks.

Unclear risk profile. The exposure of workers, consumers and the environment to novel nanomaterials can lead to threats not known from conventional chemical substances.

Regulatory and liability risks. The current uncertainty in risk assessment can cause fatal regulatory and liability risks in the value chain.

NanoRisk Check is a new tool that will give you an overview of your company's risk position regarding the handling and use on nanomaterials in products.

Target group: NanoRisk Check is aimed at companies in R&D, production, manufacturing and retailing.

NanoRisk Check includes the nano-specific

- assessment of the **suitability of the current risk management system**
- on-location analysis of **occupational safety** in production (HSE risks)
- analysis of the **product and liability risks** situation

NanoRisk Check will be conducted by renowned nanotechnology experts from TÜV SÜD Industry Service (Munich) and the Innovation Society (St.Gallen) in a block of 2 ½ days duration. It comprises:

- Day 1: Factory tour with persons responsible for operations
- Day 2: Analysis and processing of findings
- Day 3 (half day): Presentation of results

Your benefit: In best time you will gain an overview of potential shortcomings. At the same time **NanoRisk Check** is a first step you can **build on for further solutions**.

Interested? Just call us.

TÜV SÜD Industry Service GmbH, Munich (Germany)

TÜV SÜD (www.tuev-sued.de) is a technical service provider with 10'000 employees and world-wide activities in the strategic business units INDUSTRY, MOBILITY and PEOPLE. The range of our services comprises consulting, controls, tests, professional opinions as well as certifications and training. Our goals are reliability, safety and quality as well as environmental protection and efficiency.
